PRECAUTIONS

1. Always disconnect the chassis from power line when soldering. Turning the power switch OFF is not enough. Power line leakage passing through the heating element may destroy the transistors.
2. Never attempt to do any work on the transistor amplifiers without first disconnecting the AC line cord and waiting until the power supply filter capacitors have discharged.
3. Replacement for output and driver transistors, if necessary, must be made from the same beta group as the original type.
4. If one output transistor burns out (open or short) always remove all output transistors in that channel and check the bias

adjustment, the control and other parts in the network with an ohm-meter before inserting a new transistor. All transistors in one channel will be destroyed if the base biasing circuit is open on the emitter end.

5. When mounting a replacement power transistor, be sure the bottom of the flange, the mica insulators and the surface of the heat sink are free of foreign matter, for they may cause transistors failure.
6. Silicon grease must be applied between the transistor and the mica insulator, and between the mica insulator and the heat sink for better heat conduction.

BIAS (IDLING CURRENT) ADJUSTMENT

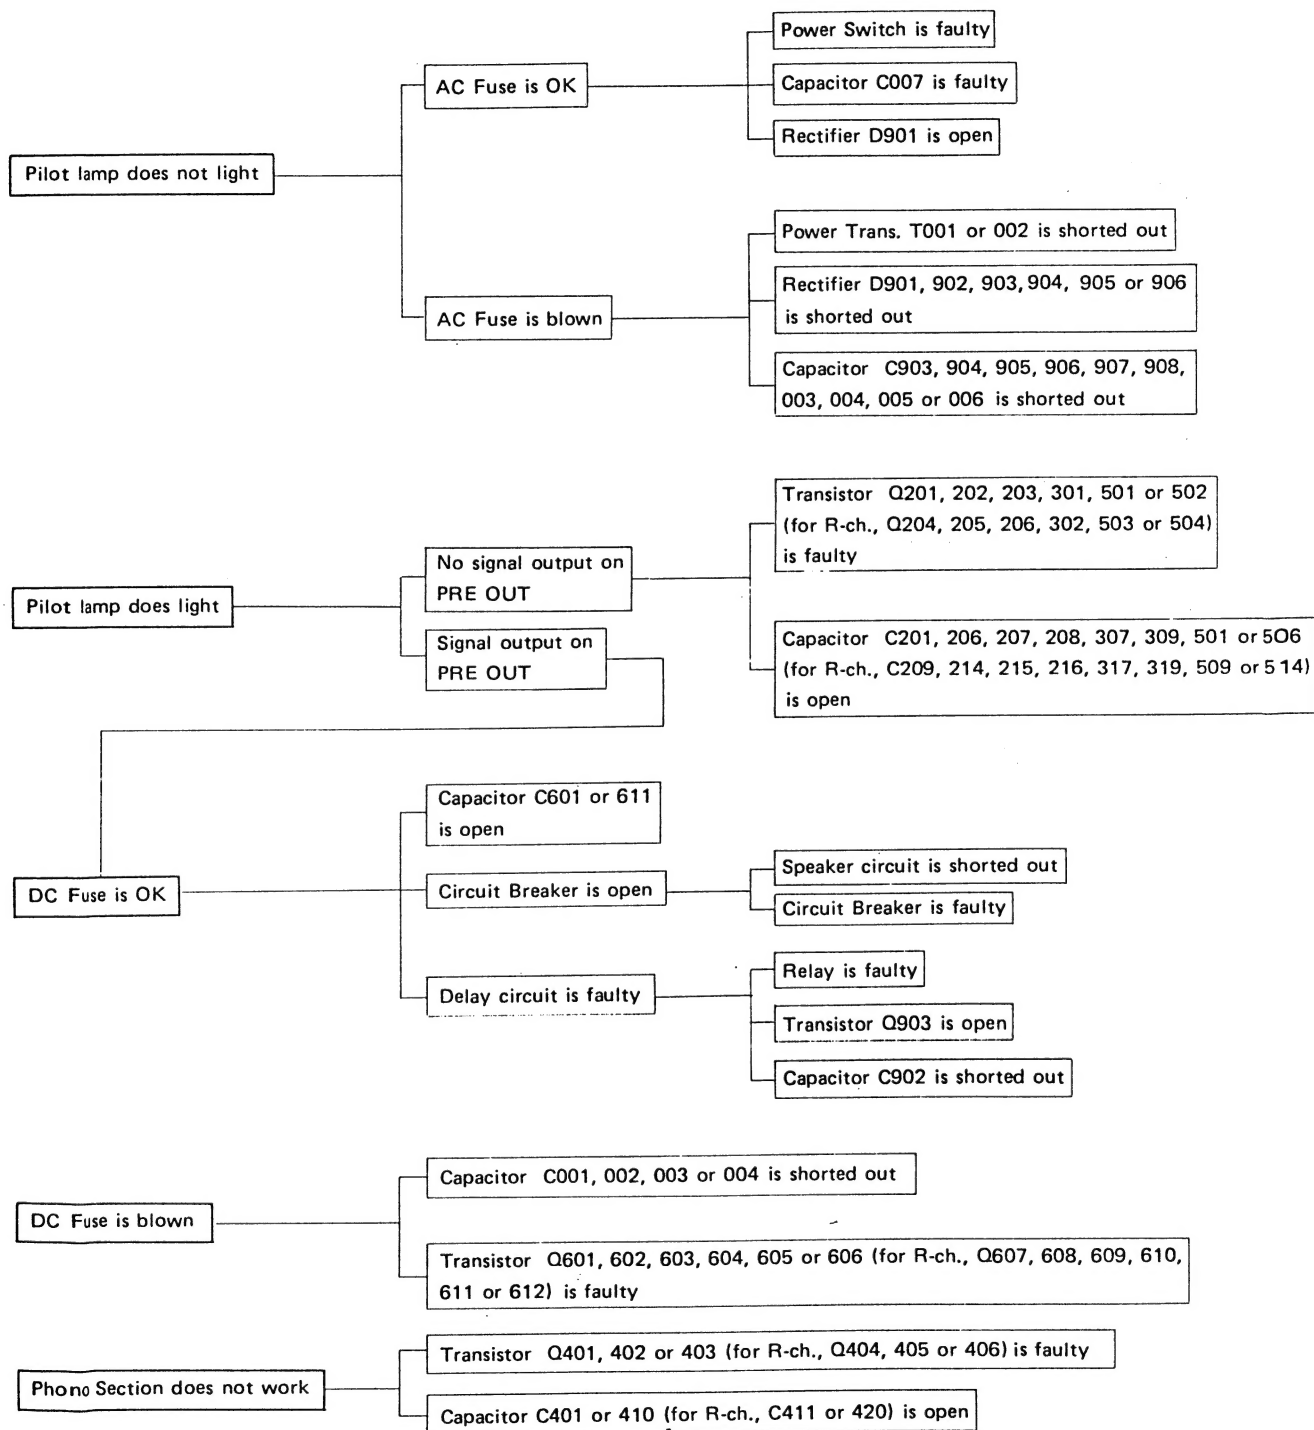

Adjust Idling Current using a DC milli-volt meter.

1. Set Volume Control to minimum position = no signal input.
2. Connect the plus lead of a DC mV meter to pin No.4 (on Main Amp. PCB) and the minus lead of a DC mV meter to pin No.3 (see below).
3. Rotate VR601 potentiometer (on Main Amp. PCB) to obtain a 15mV reading on DC mV meter.
4. Repeat the steps 2 and 3 as above for Right channel (use pins No.1, No.2 and potentiometer VR602). Plus lead to pin No.1 and Minus lead to pin No.2.

ADDENDUM

ADDENDUM: CHANGES

The following changes have been made on the Main Amplifier Circuit Board concerns from the production units of Serial No. E 67611 and F 012161 and on.

1. Bracket, Main Amp PCB — changed from type CR6 (Part No. 648211117) to type CR4 (Part No. 648211120).

DIFFERENCE: The new type has the insert portion slightly shorter than the old type.

2. MAIN Amp PCB — changed from the board type "AF-33C" (Part No. 140600651) to the type "AF-33D" (Part No. 140600655).

REASON: In accordance to the change incorporated as the item 1 above.

NOTE: Main Amp PCB w/components is also changed from Part No. 141610231 to Part No. 141610240 accordingly to the change of the Printed Circuit Boards.

CAUTION: Do not use the new Main Amp PCB "AF-33D" on the old type Bracket, as the electrical connections may become unstable causing damages to transistors and other parts.
